Pred. No. is the number of results predicted by chance to have a

em\_htgo\_mus:\* em\_htgo\_other:\*

em\_htgo\_hum:\*

em\_htg\_rod:\* em\_htg\_vrt:\*

score greater than or equal to the score of the result being and is derived by analysis of the total score distribution.

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Length 202252;

tissue(s): Human Grade I Chondrosarcoma Cell Line The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT773-Per vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is AGAMICGGC. The cell line was provided by Dr James Martin from University of Iowa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AL529438 LTI_NFL001_NBC4 Homo sapiens cDNA clone CS0DD006x005 3 prime, mRNA sequence.

Five prime end enriched, double-stranded cDNA was digested with Not I and cloned into the Not I and Eco RV sites of the pCMVSPORT 6 vector. Library was normalized Library was constructed by Life Technologies. *Contact: Feng Liang Life Technologies. *Contact: Feng Liang Life Technologies. a division of Invitrogen 9800 Medical Center Drive Rockville, Maryland 20850, USA Fax: (1) 301 610 Http://fullsani: fliang@lifetech.com URL: http://fullsani: 127 g 110 t 19 others
